$\$105/1.03 = \101.9417 , which is 1.019417 unit of a 100 zero-coupon bond. The answer is (D). 4. The answer is (E). All derivatives involve credit risk. It is just the matter of exposure of the risk. For example, for forward contract, the short forward faces the credit risk that the buyer is unable to pay for the underlying asset.

Derivatives, such as futures or options, are financial contracts which derive their value from a spot price, which is called the “underlying”. For example, wheat farmers may wish to enter into a contract to sell their harvest at a future date to eliminate the risk of a change in prices by that date.
