Marine Mammals Second Edition Book

Marine mammals oscillate their body in an up-and-down (dorso-ventral) direction. Other animals, e.g. penguins, diving ducks, move underwater in a manner which has been termed "aquatic flying". [7] Some fish propel themselves without a wave motion of the body, as in the slow-moving seahorses and Gymnotus .

Animal locomotion - Wikipedia

Marine biology is the scientific study of the biology of marine life, organisms in the sea. Given that in biology many phyla, families and genera have some species that live in the sea and others that live on land, marine biology classifies species based on the environment rather than on taxonomy.. A large proportion of all life on Earth lives in the ocean.

Marine biology - Wikipedia

Marine pollution incidents among the Pitcairn Islands have been minimal. In recent times, there has been one incident of tar being found on the beach at Ducie in July 1992 (Benton, 1995). Water-borne litter, however, is a different matter (see Box 34.1). During the 19th century a number of ships were wrecked at Pitcairn, Oeno, and Ducie, and rusting metallic debris from some of these can still ...

In UK, mermaid tears are the second common plastic litter found on the beaches according to the Marine Conservation Society's 2007 data and a Surfers Against Sewage (SAS) report. According to Charles Moore, these resin pellets account for around 8 percent of annual oil production and are the raw material for the 260 million tons of plastic ...

Budding is a form of asexual reproduction that results from the outgrowth of a part of a cell or body region leading to a separation from the original organism into two individuals. Budding occurs commonly in some invertebrate animals such as corals and hydras. In hydras, a bud forms that develops into an adult and breaks away from the main body, as illustrated in Figure 24.3, whereas in coral ...
