I've been using Rspec to perform unit tests with my Ruby applications. I typically test each method in each class to ensure functionality at a very low level. You decide what the unit is by looking for the smallest testable part. Integration Tests. An integration test is done to demonstrate that different pieces of the system work together.

Testing: Unit vs Integration vs Regression vs Acceptance ...

The Given-When-Then formula is a template intended to guide the writing of acceptance tests for a User Story: (Given) some context, (When) some action is carried out, (Then) a particular set of observable consequences should obtain.

What is "Given - When - Then"? | Agile Alliance

So, you and your team have decided to make test automation a priority. You plan to use behavior-driven development to shift left with testing. You read the BDD 101 Series up through the previous post. You picked a good language for test automation. You even peeked at Cucumber-JVM or another BDD framework on your own. That's great! Big steps! And now, you are ready to write your first Gherkin ...
