The Tropic Of Cancer By

The Tropic of Cancer, which is also referred to as the Northern Tropic, is the most northerly circle of latitude on Earth at which the Sun can be directly overhead. This occurs on the June solstice, when the Northern Hemisphere is tilted toward the Sun to its maximum extent. It also reaches 90 degrees below the horizon at solar midnight on the December Solstice.

Tropic of Cancer - Wikipedia

Tropic of Cancer is a novel by Henry Miller that has been described as "notorious for its candid sexuality" and as responsible for the "free speech that we now take for granted in literature." It was first published in 1934 by the Obelisk Press in Paris, France, but this edition was banned in the United States. Its publication in 1961 in the U.S. by Grove Press led to obscenity trials that ...

Tropic of Cancer (novel) - Wikipedia

Tropic of Cancer, latitude approximately 23 degrees 27 minutes north of the terrestrial Equator. This latitude corresponds to the northernmost declination of the Sun's ecliptic to the celestial equator. At the summer solstice in the Northern Hemisphere, around June 21, the Sun is directly over the Tropic of Cancer.

Tropic of Cancer | Definition & Facts | Britannica

The Tropic of Cancer is a line of latitude circling the Earth at approximately 23.5° north of the equator. It is the northernmost point on Earth where the sun's rays can appear directly overhead at local noon. It is also one of the five major degree measures or circles of latitude dividing the Earth (the others are the Tropic of Capricorn, the ...

Tropic of Cancer - Overview and Geography

The Tropic of Cancer was named because at the time of its naming, the sun was positioned in the Cancer constellation during the June solstice. Likewise, the Tropic of Capricorn was named because the sun was in the constellation Capricorn during the December solstice. The naming took place about 2000 years ago, and the sun is no longer in those constellations at that time of year.

How the Tropic of Cancer and Tropic of Capricorn Were Named

The location of the Tropic of Cancer remains flexible. It shifts southwards at an approximate rate of half an arcsecond of latitude per year. The
